

# Rock Tavern to Sugarloaf Upgrade Project

Less than a year after starting, construction on the New York Transco's Rock Tavern to Sugarloaf Upgrade Project (RTS) is nearing completion. Once complete, the RTS will add capacity to the electric grid and support the flow of clean energy.

## Restoration activities have begun including:

- Removal of construction matting used for access roads and work pads
- Removal of temporary erosion control features\*
- Removal of construction debris
- Reseeding and strawing impacted areas
- Consultations with agricultural operators on restoration

\* Temporary erosion control measures such as green compost filter socks and silt fences may remain in place in some locations until revegetation

## Visual Assessment

Following energization, NY Transco will assess and implement potential landscaping options for select areas. This will be ongoing through 2024.

If you have any questions, please contact us at 800-314-4236 or [questions@RTSupgrade.com](mailto:questions@RTSupgrade.com).

## Upcoming RTS Milestones

- Spring 2023: Construction Complete
- Summer 2023: RTS Energization
- Spring 2023-2024: Restoration & Vegetation Monitoring
