

## Rock Tavern to Sugarloaf Project Update

February 1, 2023

Dear Neighbor:

New York Transco (Transco) would like to inform you of upcoming extended work hours on the Rock Tavern to Sugarloaf Upgrade (RTS) anticipated for activities off Sugar Loaf Mountain Road next week. This work will occur within the rebuilt 115kV Sugarloaf Substation (currently under construction). This work involves the delivery of a substation autotransformer on or about February 6, followed by activities occurring 24 hours a day after the autotransformer is delivered, continuing for several days.

This 24-hour work is necessary to install the autotransformer on its foundation pad, assemble the autotransformer and perform oil processing until the transformer is ready for testing. Oil processing is continuous and cannot be stopped until it is complete. The time for this activity varies by temperature and weather conditions. There will be some overnight noise from the oil-processing equipment and personnel working at the rebuilt substation.

We appreciate your patience and cooperation as we continue to work on RTS.

If you have any questions on RTS, please contact us at 800-314-4236 (toll-free) or [questions@RTSUpgrade.com](mailto:questions@RTSUpgrade.com).

Thank you,

Shannon Baxevanis  
Stakeholder & Communications Lead  
New York Transco

### About RTS

*RTS is a proposed 12-mile transmission line upgrade from New Windsor to Chester that stays within existing utility corridors and/or utility-owned lands to help New York meet key environmental and economic goals by facilitating the flow of clean energy.*
